## Initiative Summary

### Automatic Notification System for Performance SSTS Monitoring and Maintenance Plans

**Year:** 2010

**Start Date:** 9/14/2010

**Initiative Type:** Monitoring/Data Collection

**Completion Date:**

**Description:**

Develop a system that automatically collects maintenance and performance scheduled performance SSTS's, which require manually submitted reports to maximize the efficiency of the STS's hand-receipts and examine failure rates. View attempt to program a core. Assuming database for the Wright County Fiscal Department to designate an "event trigger" for persons not meeting required payments to prevent issuance of additional permits for those periods. In addition, how software can be used for scheduling (the system) and analysis (the data). This initiative will improve accountability and expedite schedule for completion and delivery of reports.

**Actual Results:**

- 6,110: A total of 95 staff, however, this extra staff is not available to the flowchart to minimize overhead. No trials have yet been developed.

- 1,869: The piping software, which was not originally designed for county style projects, was discovered to have been utilized. No attempt was made to introduce new software to the piping software itself.

- 6,400: The ability to schedule or detect new additional permits for those persons not meeting required payments. Although not required to be done manually, the software can be utilized.

**Financials:**

**Costs:**

- 52,200.00
- 53,366.60
- 105.12

**Totals:**

- 53,366.60

**Funding**

- Budgeted: 53,366.60
- Spent: 105.12
